NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies such as metal and collected including autoimmune diseases and allergies such as metal and

The present invention describes a cytokine receptor designated zcytor17. Zcytor17 has immunomodulatory, antiinflammatory, antiviral. Cytostatic, antirheumatic, antiarthritic and muscular activities. The zcytor17 proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or antizorderoral antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral
                                                                                                                                                  Isolated polynucleotide encoding a useful for treating and diagnosing spleenic, blood or bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antiinflammatory; antiviral; antirheumatic; antiarhritic; cytostatic; muscular; lymphoid; immune; inflammatory; spleenic; blood; bone; infection; immunosuppression; cytocoxicity; leukopenia; Crohn's disease; autoimmune disease; rheumatoid arthritis; multiple sclerosis; cancer;

They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q1 chromosomal region. ABA93767 t ABA93943 and ABB05730 to ABB05745 represent sequences used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                         The invention relates to a novel isolated zcytor17 ligand polypeptide. A polypeptide of the invention has antiinflammatory, dermatological, immunosuppressive, and antimicrobial activity, and may have a use in a vaccine. The polypeptide is useful for treating inflammatory diseases, such as inflammatory bowel disease, ulcerative colitis, Crohn's disease, atopic dermatitis, eczema, psoriasis, endotoxaemia, septicaemia, toxic shock syndrome or infectious diseases. The present sequence is used in
                                                                                                                                                                                                                                                                                                                                         New zcytor17 ligand polypeptides, useful for treating inflammatory diseases, such as inflammatory bowel disease, ulcerative colitis, Crohn disease, atopic dermatitis, eczema, psoriasis, endotoxemia, septicemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ss; gene; human; zcytor17; antiinflammatory; dermatological; immunosuppressive; antimicrobial; vaccine; inflammatory disease; inflammatory bowel disease; ulcerative colitis; Crohn's disease; atopic dermatitis; eczema; psoriasis; endotoxaemia; septicaemia; toxic shock syndrome; infectious disease.

```
The invention describes an isolated multimeric or heterodimeric cytokine creceptor (I) having at least one polypeptide having 90 percent sequence condentity with a 732 (S1) or 649 (S2) amino acid sequence given in specification, and where (I) binds a ligand comprising a 164 (S3) amino acid sequence, given in specification, or at least one polypeptide comprising residue 20-227 of (S1). (I) is useful for killing cancer cells and producing an antibody to (I) and a cytokine-binding domain of a class I cytokine receptor. A composition (C1) comprising (I) and a cytokine-binding domain of a class I cytokine receptor and a vehicle is useful for : reducing haematopoietic cells and hematopoietic progenitor cells in a mammal; inhibiting zcytor171ig-induced proliferation or differentiation of hematopoietic cells and hematopoietic progenitor cells; reducing cytor171ig-induced inflammation; treating a mammal afflicted with an inflammatory disease in which zcytor171ig plays a role. The disease is a chronic inflammatory disease such as inflammatory bowel disease. Chronic inflammatory disease is acute inflammatory disease such as endotoxemia, septicaemia, toxic shock syndrome and infectious disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibacterial; immunosuppressive; cell proliferation inhibitor; immune response inhibitor; inflammatory response inhibitor; multimeric cytokine receptor; inflammatory response inhibitor; multimeric cytokine receptor; heterodimeric cytokine receptor; cancer; cytokine-binding domain; class I cytokine receptor; haematopoietic cell; zcytor17lig-induced differentiation; hematopoietic progenitor cell; zcytor17lig-induced inflammation; inflammatory disease; inflammatory bowel disease; ulcerative colitis; crohn's disease; atopic dermatitis; eczema; psoriasis; endotoxaemia; septicaemia; toxic shock syndrome; zcytor17; human; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (SPRE/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immune response in a mammal exposed to an antigen or pathogen. An inflammatory response inhibiting composition is useful for suppressing inflammatory response in a mammal with inflammation. An antibody that specifically binds to (I) is useful for detecting the presence of a multimeric or heterodimeric cytokine receptor in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2903

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                     The present invention describes a cytokine receptor designated zcytor17. Caytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, antirheumatic, antiarthritic and muscular activities. The zcytor17 cartivines are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections. They are also useful for including certain viral infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the cemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-JUN-2000;

```
Creceptor (I) having at least one polypeptide having 90 percent sequence (C identity with a 732 (S1) or 649 (S2) amino acid sequence given in Specification, and where (I) binds a ligand comprising a 164 (S3) amino acid sequence given in Specification, or at least one polypeptide (C acid sequence, given in specification, or at least one polypeptide (C comprising residue 20-227 of (S1). (I) is useful for killing cancer cells and producing an antibody to (I) and a cytokine-binding domain of a class (I cytokine receptor. A composition (C1) comprising (I) and a cytokine-binding domain of a class (I cytokine receptor and a vehicle is useful (for: reducing haematopoietic cells and hematopoietic progenitor cells in a mammal; inhibiting zcytor171ig-induced proliferation or differentiation (C a mammal; inhibiting zcytor171ig-induced proliferation or differentiation (C cytor171ig-induced inflammation; treating a mammal afflicted with an (C inflammatory disease in which zcytor171ig plays a role. The disease is a cut chronic inflammatory disease is an inflammatory bowel disease; a copic dermatitis, eczema and (C chronic inflammatory disease is a cute inflammatory disease such as inflammatory disease such as inflammatory disease.

C chronic inflammatory disease is acute inflammatory disease such as captor disease.

C chronic inflammatory disease is acute inflammatory disease such as captor disease.

C chronic inflammatory disease is acute inflammatory disease such as inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiinflammatory; antiulcer; dermatological; antiallergic; antipsoriatic antibacterial; immunosuppressive; cell proliferation inhibitor; immune response inhibitor; inflammatory response inhibitor; multimeric cytokine receptor; heterodimeric cytokine receptor; class I cytokine receptor; haematopoietic cell; crytokine-binding domain; class I cytokine receptor; haematopoietic cell; crytoxi771ig-induced differentiation; hematopoietic progenitor cell; zcytor171ig-induced inflammation; inflammatory disease; inflammatory bowel disease; ulcerative colitis; crohn's disease; atopic dermatitis; eczema; psoriasis; endotoxaemia; septicaemia; toxic shock syndrome; zcytor17; human; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sprecher

An antibody that specifically binds to (I) is useful for detecting the presence of a multimeric or heterodimeric cytokine receptor in a biological sample. This sequence encodes a human zcytor17 cytokine receptor that can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                        Alignment
                                                                                                                              The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence encodes the human NR10.3 protein from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo
                                                                                                                                                                                                                                                                    NR10 splicing variants of hematopoietin receptor proteins and encoded genes, applicable in searching hematopoietic factors and developing remedies for immunological and hematopoietic diseases.

NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies such as metal and capable of the capable of the capable of the capable of the capable of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies such as metal and

The present invention describes a cytokine receptor designated zcytor17. CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, cantirheumatic, antiarthritic and muscular activities. The zcytor17 CC proteins are useful for treating and diagnosing lymphoid, immune, cytotor17 antibodies are useful in stimulating cell-mediated immunity and czytor17 antibodies are useful in stimulating cell-mediated immunity and cfor stimulating lymphocyte proliferation, such as in the treatment of infections. They are also useful for inducting cytotoxicity and for infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, canceritis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the Sql1 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the cytory.
                                                                                                                                                                                                                                                                                                                                                                                                                                        2; Page 161-166; 235pp; English.

CC metastasis, osteoporosis resulting from an excess of bone-resorbing and CC diseases such as cell proliferation, metabolic and reproductive hormone CC related conditions. They are useful for treating wadical conditions and CC carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell, CC cervical and ovarian cancers, lung cancer (SCLC and NSCLC), including CC cancer-associated cachexia, fatigue, solid tumours (e.g., osteosarcoma, CS squamous cell carcinoma), haematologic disorders e.g., adenocarcinoma (for example, breast cancer), CC squamous cell carcinoma), haematologic disorders, anaemia (e.g., anaemia cel, ringed sideroblasts or with excess blastic anaemia), myelocypastic syndromes (including refractory anaemia, refractory anaemia cel with ringed sideroblasts or with excess blasts), idopathic thrombocytocypaenic purpura (ITP), sickle cell vasocclusive crisis, myelofibrosis/ myeloid metaplasia, osteoclast disorders that lead to bone loss such as costeoporosis including post-menopausal osteoporosis, periodontitis regulating in tooth loosening or loss, prosthesis loosening after joint ceplacement, neurodegenerative conditions (e.g., acute polyneuropathy, C myasthenia gravis, chronic fatigue syndrome, transmissible cerabral ischaemic diseases. HPR1 and HPR2 polypeptides are also useful cerebral ischaemic diseases. HPR1 and HPR2 polypeptides are also useful cerebral mammary development and infertility. The present sequence is human HPR1 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptides HPR1 and HPR2. Sequences of the invention are useful for treating cell proliferation conditions e.g., pancytopaenia, leukopaenia anaemia, thrombocytopaenia, neurodegenerative disorders and osteoporor resulting from a lack of bone-forming cells. They are also useful for treating cell proliferation conditions such as leukaemia and tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human and murine hematopoietin receptor useful for treating cell proliferation, hormone related conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          06-OCT-2000; 2000US-0238706P

                                                                                                                                                                                                                                                                                                                                Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule encoding a type-1 cytokine receptor GLM-R polypeptide. The nucleic acid molecules, polypeptides, antibodies, agonists or antagonist, and compositions are useful for treating disorders characterized by the over or under abundance of monocytes or macrophages. The nucleic acid molecules are useful as hybridization probes, in chromosome and in gene mapping, and in generating antisense RNA or DNA. The present sequence represents a cDNA encoding a human GLM-R polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid molecule encoding a GLM-R polypeptide, useful for treating disorders characterized by the over or under abundance of monocytes or macrophages.
                                                                                                                                                                                                                                                                                                                                                         Sequence 2481
